

Week 1 Deliverables: Portfolio Sitemap + Toolkit

Student Name: Jared Noel

Course / Track: Machine Learning Engineer

1. Proof Statement & One-Line Why

Copy and paste this text directly into the text field/notes of your internship portal submission card, as well as keeping it here.

Proof Statement

I build production-ready Retrieval-Augmented Generation (RAG) and agentic backend pipelines using Python, LangGraph, and FastAPI for technical leads and engineering managers at AI-driven startups who need to ship reliable, secure context-aware features rather than fragile AI demos, so they will book a 15-minute technical discovery call with me.

One-Line Why

A resume lists the frameworks I know, but owning this site proves I can build multi-tenant AI backends that handle data isolation, PII scrubbing, and real-world vector search without breaking in production.

2. Portfolio Sitemap Sketch

Replace the placeholder box below with the photo of your handwritten sitemap sketch.

3. AI Workspace Configuration (Claude Project)

Insert a screenshot showing your Claude Project settings with the custom instructions pasted in.

Claude Project Setup Screenshot Placeholder

4. Sitemap Pressure-Test Prompt & AI Feedback

Insert a screenshot or paste the output from your Claude Project pressure-test prompt.

Sitemap Refinement Note (What Changed)

Key Change Made: Based on Claude's critique, I'm reframing my "About" section to focus on my technical judgment, adding a permanent "Book a Call" CTA in the header for easy access, and shifting my case studies from basic tech lists to showing how I solve real production problems like cross-tenant leakage and PII scrubbing.
