

Kill Your Darlings — Curate Your Images

Image List

Page / Use	Image Needed	Source	Status
Home — hero	Background texture	AI-generated (Canva)	Have it
Case: MemoAgent	Workspace UI screenshot	Real capture	Have it
Case: LGU Risk Radar	Dashboard screenshot	Real capture	Have it
Case: Content Refresh Priority Queue	Notebook/pipeline screenshot	Real capture	Pending — work not finished
About	Photo of me	Real photo	Still need to take/choose one
Site-wide — GitHub / LinkedIn / email links	Functional icons	Icon library (Lucide), recolored to kit palette	Not AI-generated — see note below
Site-wide — CTA icons (book a call, live demo)	Small functional icons	Icon library (Lucide), recolored to kit palette	Not AI-generated — see note below

The Keepers (Final Image Set)

Hero background — "Subtle Technical Grid Composition":

Chosen hero background texture — AI-generated (Canva), one of four candidates from a single prompt.

- Hero background: “Subtle Technical Grid Composition” — the chosen AI-generated texture
- MemoAgent case: workspace UI screenshot (real capture)
- LGU Risk Radar case: dashboard screenshot (real capture)
- Icon set: Lucide icons, recolored to #24303D / #3F7268
- About page photo: pending — not yet taken/chosen

Where I Chose Real Over AI, and Why

Work screenshots (MemoAgent, LGU Risk Radar): used real captures, not AI stand-ins, because the point of a case study is proving the thing actually works — a generated mockup would undercut the proof instead of supporting it.

About page photo: will use a real photo, not a generated one, because the subject is me. A synthetic headshot would work against the direct, no-buzzwords voice the rest of the site is built on.

GitHub / LinkedIn / email icons: chose a standard icon library over AI generation. These are recognizable, in some cases trademarked, marks — an AI reinterpretation risks looking slightly wrong, and a slightly-wrong logo reads worse than a correct one. Pulled from Lucide instead and recolored to match the kit.

Hero texture: this is the one place AI generation made sense — it’s abstract connective tissue, not proof of anything, so there’s no “real” version to prefer over it.

What I Rejected, and Why

Generated four grid-texture variants from one prompt. Picked “Subtle Technical Grid Composition” and rejected the other three because they read as busier and more visually active by comparison — more line density competing for attention instead of sitting quietly behind hero text. The chosen version stays restrained enough to support the kit’s “calm, work stays loudest” mood instead of competing with it.
